# Towards Bringing Together Numerical Methods for Partial Differential Equation and Deep Neural Networks

Progress Update, Supervisor - Markus Hoffmann

Stanislav Arnaudov | September 26, 2019
Towards Bringing Together Numerical Methods for Partial Differential Equation and Deep Neural Networks

Progress Update, Supervisor - Markus Hoffmann

Stanislav Arnaudov │ September 26, 2019

Project description

Basic idea: Perform numerical simulation with ML-models

Project description

Basic idea: Perform numerical simulation with ML-models

- Concrete problem: Flow around an object according to the Navier–Stokes equations.

Project description

Basic idea: Perform numerical simulation with ML-models

- Solutions of the simulation can be represented as images.

Project description

Several cases to investigate

- Constant model
- Fluid speed model
- Fluid viscosity and density model
- Object in space model

Stanislav Arnaudov – Progress Update

September 26, 2019

7/15

Data Generation

- Use of numerical solver for real simulation data generation.
- The simulation has several adjustable parameters
  - inflow speed
  - fluid viscosity
  - fluid density
- Reynolds Number in the range of [90, 350]
